

RESOURCE MANAGER

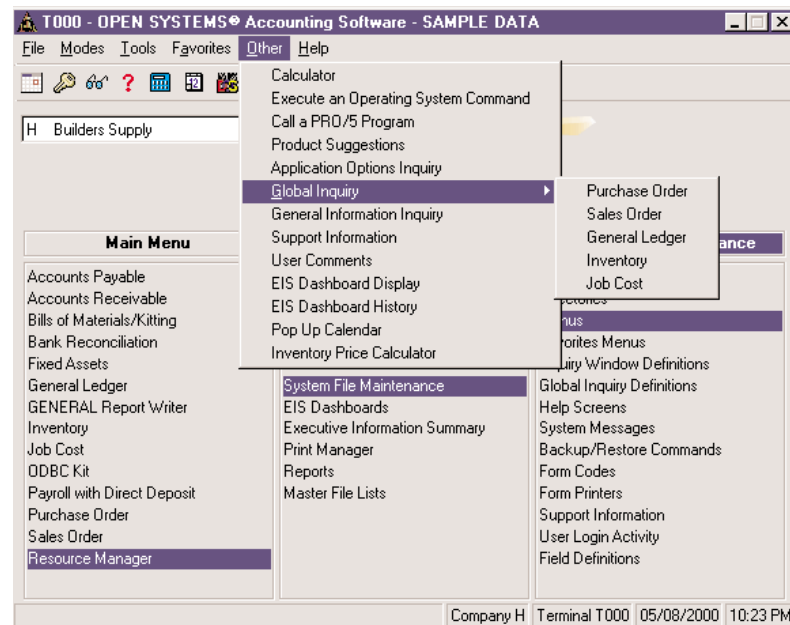

Providing the power to make everyday operations a snap

Resource Manager is required with all OPEN SYSTEMS® Accounting Software (OSAS®) applications. It provides you with simple, trouble-free installation and integration. Resource Manager includes general system services and utilities that help eliminate the need for entering intricate operating system commands, thus reducing the chance of error.

You can keep everyday operations running smoothly with Resource Manager utilities. You'll be able to use Workstation Configuration Maintenance to define system devices, set up screen colors and function keys, and establish defaults for each workstation—all to your specific needs. You determine how to track company information with Company Setup. This includes maintenance of critical information by company and for multiple companies, creating and converting data files, setting up access codes for data security, and tailoring your menus.

The Executive Information Summary capabilities of Resource Manager give you the ability to consolidate, calculate, and display summary information based on data from other OSAS applications. You can quickly pull facts from any of these applications or vertical software modules. Compare information across departments, companies, years, quarters, days, or even hours and minutes.

Resource Manager also offers a print management tool for OSAS called Print Manager. It lets you save your reports to a file and print them later, giving you a complete report library. You can also keep track of where users are in the system and the last menu option they used, especially during posting and backup procedures.

OSAS Resource Manager Offers Choices and Flexibility With These Key Features

- You'll have fast, easy access to information on key fields, codes, and IDs from predefined inquiry windows. The windows can be customized to provide just the information you want.
- To help you make up-to-the-minute management decisions, reports are printed with time stamps in 12 or 24-hour formats.
- You'll have true multiuser processing on multiuser networks such as Windows® 95, Windows 98, Windows 2000, Windows NT, and Novell® (using Win95/98 or Win NT Workstations only).
- As many as nine sessions may be running on one workstation at once. Save time by starting a post here and running a report there.
- You can easily set up shortcuts on networked computers running Windows after you install OSAS by using the Set Up Terminals function. This will allow you to set up multiple icons for OSAS on other workstations
- You can easily access Global Inquiry, regardless of the OSAS application you are currently working in. Global Inquiry allows you to locate any information you need, at any level of detail. You can access data in another OSAS application file, and you won't have to exit and open multiple programs or wait for reports to print.
- You can view important data with inquiry windows and quickly sort it according to the key data you select. You can also use inquiry window math when you want to define the data to calculate statistics.
- Define access codes for each workstation, providing password protection. You can protect individual applications, menus, and functions. The system security file is encrypted.
- You'll have standardized access to all inquiry windows, information windows, online field help, and on-the-fly maintenance.
- Eliminate the need for keyboard templates by using online keyboard help. You may choose whether to display the function key descriptions at the bottom of your screen.
- You'll be assured that your shipments and correspondence have the correct country code. A list of codes is provided, and it can be sorted by code or country name.
- You'll find the answers you need with scrollable help screens. Up to 999 lines of help are provided on a specific field.
- BBx PROGRESSION/5® from BASIS International Ltd. provides a stable, full-featured foundation for OSAS applications to build on. It is one of the most powerful business application languages available.
- Maintain data for nearly an unlimited number of companies by using 3-character company IDs.
- A separate sample data directory is provided for learning and training purposes. In addition, you can have multiple live data directories for system flexibility and organization.
- You'll be able to execute internal and external functions from anywhere within the OSAS system with a special menu that you can modify.
- You can define a default location and bank ID by workstation.
- Identify missing reports through optional banner pages. You can identify users by ID, name, report selection criteria, and date and time stamp.
- A handy pop-up calendar provides public and private reminders that can be displayed automatically when you start OSAS. You can create and edit dated personal and system-wide messages and view them for any date.
